Applications:

Laminated glass is a type of safety glass that consists of two or more layers of glass bonded together with an interlayer, usually made of polyvinyl butyral (PVB) or ethylene-vinyl acetate (EVA). This interlayer holds the glass together even when it is broken, reducing the risk of injury and enhancing security.

Packing and Shipping:

Our professionally trained warehouse staff ensures that your glass is safely loaded so that it reaches its destination in the same perfect condition in which it left our production facility. We are constantly evolving our packing and loading techniques to ensure easier off-loading, minimal breakage, and other safeguards to combat seasonal changes in climate.

1. Interlay paper between two sheets
2. Seaworthy wooden crates
3. Iron/Plastic belt for consolidation
